ABSTRACT

In California, studies of the flow of students from high school to higher education and from community colleges to four-year institutions have been conducted annually since 1978 by the California Postsecondary Education Commission. These studies have sought to identify trends in college-going rates and examine the gains and losses in college-going rates experienced by various counties in light of statewide trends; to compare the ethnic distribution of high school graduates with that of first-time freshmen in higher education; and to examine trends in community college transfer, comparing the ethnic distribution of transfers to that of first-time freshmen in the community colleges. Highlights of the 1980 study included: (1) college-going rates for recent high school graduates continued to increase for public higher education; (2) the percentage of male high school graduates enrolling in the University of California (UC) and the California community colleges was higher than the percentage of females enrolling in these institutions, while a greater percentage of females than males enrolled in the California State Universities (CSU); (3) the percentages of Blacks and Hispanics continued to be smaller in the distribution of first-time freshmen in public higher education than in the distribution of high school graduates; and (4) community college transfers to the UC continued to decline while transfers to CSU increased. Extensive data tables are appended. (KL)

The California Postsecondary Education Commission was created by the Legislature and the Governor in 1974 as the successor to the California Coordinating Council for Higher Education in order to coordinate and plan for education in California beyond High school. As a state agency, the Commission is responsible for assuring that the State's resources for postsecondary education are utilized effectively and efficiently; for promoting diversity, innovation, and responsiveness to the needs of students and society; and for advising the Legislature and the Governor on statewide educational policy and funding.

The Commission consists of 15 members. Nine represent the general public, with three each appointed by the Speaker of the Assembly, the Senate Rules Committee, and the Governor. The other six represent the major educational systems of the State.

The Commission holds regular public meetings throughout the year at which it takes action on staff studies and adopts positions on legislative proposals affecting postsecondary education. Further information about the Commission, its meetings, its staff, and its other publications may be obtained from the Commission offices at 1020 Twelfth Street, Sacramento, California 95814; telephone (916) 445-7933.

HIGHLIGHTS OF THE FINDINGS

College-Going Rates

- College-going rates for recent California high school graduates continued to increase in the three public segments of higher education in Fall 1980, accompanied by a decline in the number of high school graduates which began in 1976.

Sex Differences in Rates

- The percentages of male high school graduates enrolling in the University of California and the California Community Colleges were slightly higher than those of women, while the percentage of women graduates enrolling in the California State University was higher than that of men. Overall, the rate for women was one percentage point higher than that of men.

Ethnic Differences in Rates

- Percentages of Hispanics and Blacks continued to be smaller in the ethnic distribution of first-time freshmen in public higher education in California than in the distribution of high school graduates. The reverse was true for Asians and probably for American Indians and Filipinos, whose numbers in both groups were very small. The percentages for Black women were higher than those for Black men in all segments, while the percentages for Asian men were higher than those found for Asian women in all segments. While the percentages of Hispanic men and women among high school graduates were the same, the percentages of Hispanic men in higher education were higher than of Hispanic women.

Differences Among Counties

- Differences among California counties in college-going rates continued to be significant, both for particular segments and overall. Among the 20 counties with the largest numbers of high school graduates, total rates ranged from 44 to 72 percent. The range in rates for the University for these same counties was from 1 to 14 percent; for the State University, from 3 to 15 percent.

The Flow of Community College Transfers

- The number of Community College students who transferred to the University decreased again in Fall 1980, while the number who transferred to the State University increased slightly for the fall term and significantly for the full year, as a result of a large increase in transfers for the Spring 1981 term. Sixty percent of the Community College districts had fewer than 50 students transfer to the University in Fall 1980, while at least 500 students transferred to the State University from 30 percent of the districts. About 85 percent of the fall-term transfers from the Community Colleges were enrolled at the State University, or about 90 percent of the full-year transfers.

- Sex and ethnic differences in the flow of Community College transfer students were similar to those found for first-time freshmen who were recent high school graduates.

BACKGROUND ON THE STUDY

This is the fourth in a series of annual reports on the flow of students from high school to higher education in California, and from Community Colleges to four-year colleges and universities. It reproduces and updates information published in its predecessors: Access in a Broader Context: College-Going Rates in California (1978), College-Going Rates in California: Fall 1978 Update (1979), and College-Going Rates in California: 1979 Update (1981).

Purposes

A major purpose of the report is to identify trends in college-going rates during the past several years and examine relationships between gains and losses experienced by various counties in light of statewide trends. A second purpose is to compare the ethnic distribution of high school graduates with that of first-time freshmen in higher education. A third purpose is to look at trends in the flow of Community College transfer students since the mid-1960s and compare the ethnic distribution of the students who transferred to that of first-time freshmen in the Community Colleges.

Scope of the Report

College-going rates for the three public segments--the University of California, the California State University, and the California Community Colleges--have been obtained for Fall 1974 through Fall 1980. Rates for regionally accredited independent colleges and universities have been obtained since 1977. In each instance, rates were computed for each county with at least 150 high school graduates each year. Beginning in 1977, rates were computed for men and women separately. The ethnicity of both high school graduates and new students in the public segments of higher education became available for the first time in 1979, permitting comparisons of the college-going rates of the various ethnic groups.

This report also presents updated information about the flow of transfer students from California Community Colleges to four-year institutions in California. Transfer data for a four-year period--1977 through 1980--have been obtained for each Community College, with a statewide summary dating back to 1965. Information about the ethnic distribution of transfer students also became available for the first time in 1979, for use in making comparisons with other student groups.

Limitations of the Data

The scope of the report is limited by the absence of information about the flow of recent high school graduates into private postsecondary schools which do not grant degrees. The inclusion of such students in the analysis would increase significantly the overall participation rates calculated for this report, particularly for urban areas. Two other gaps in information available for analysis are numbers of California high school graduates who enrolled in colleges and universities in other states, and those receiving formal occupational training offered under other auspices than colleges and universities--for example, adult education programs of unified school districts. Thus, the college-going rates obtained in this study are underestimates of the percentages of young people enrolling in some type of postsecondary education after high school graduation.

Data for first-time freshmen in the California Community Colleges are less reliable than those for the University and the State University because of the poor reporting of the high schools of origin by some districts. In addition, the rates are confounded by uncertainty about the inclusion of high school dropouts and students who have not yet graduated from high school, all of whom are eligible to enroll in a community college under certain conditions.

COLLEGE-GOING RATES FOR FIRST-TIME FRESHMEN

Methodology

College-going rates were obtained by dividing the number of first-time freshmen 19 years of age and under by the total number of June graduates of day high schools, both public and private, for each segment and county, and statewide. These rates, expressed as percentages, are believed to be the best possible estimates of California college-going rates for recent high school graduates, in the absence of longitudinal studies.

Numbers of high school graduates were obtained from annual reports prepared by the State Department of Education for both public and private secondary schools. Student data tapes submitted annually to the California Postsecondary Education Commission by the University, the State University, and the Community Colleges were the major source of information about the high school of origin for first-time freshmen. Information about first-time freshmen in the independent colleges and universities was obtained from a special survey conducted by the Association of Independent California Colleges and Universities. Both part- and full-time students were included in the computation of the college-going rates.

Statewide Trends in College-Going Rates

Statewide college-going rates are displayed in Table 1 for the public segments of higher education for a seven-year period (1974 through 1980) and for a four-year period for the independent colleges and universities (1977 through 1980), together with numbers of high school graduates for the entire period.

The number of high school graduates has been declining since 1975, while the percentage of graduates enrolling in California colleges and universities has been increasing gradually. The decline in high school graduates between the peak year of 1975 and 1980 was less than 10 percent, but the rate of decline has been increasing during the last few years. The increase in the college-going rate between 1979 and 1980 was not large enough to compensate for this decline in numbers of high school graduates. The result was the second smallest class of first-time freshmen under the age of 20 since 1974.

The percentages enrolling in both the University and the State University have increased during the seven-year period but the 6.0 and 9.0 percent, respectively, in 1980 still fell far short of the

12.5 percent eligible for freshman admission in the University, and the 33.3 percent eligible in the State University. The Community College rate fluctuated between 41.3 and 43.3 percent during this same period, with the lowest rate for the first year of the analysis and the highest for 1977, prior to the passage of Proposition 13. The rate has increased since then but as of 1980 had not reached the 1977 rate.

When the rate for first-time freshmen in independent colleges and universities is added to that obtained for the public segments, the total college-going rate for recent California high school graduates reached 61.5 percent in Fall 1980. No inferences about trends for independent institutions can be made because of changes in institutions reporting between 1977 and 1980 and refinements made in the data which were reported. Nonetheless, the rate is judged to be quite stable at between 3.5 and 4.0 percent.

The Community Colleges enrolled more than four times as many first-time freshmen under the age of 20 in 1980 as any other segment of California higher education. Expressed another way, of the recent high school graduates enrolling in a public segment of higher education in Fall 1980, almost three-fourths were in the Community

TABLE 1

STATEWIDE COLLEGE-GOING RATES FOR RECENT HIGH SCHOOL GRADUATES
(1974-1980)

Year	Number of High School Graduates	Percentage Enrolling as Freshmen					
		UC	CSU	CCC	Total Public	Independent	Grand Total
1974	289,714	5.1%	7.6%	41.3%	54.0%	---	---
1975	293,941	5.3	7.5	43.1	55.9	---	---
1976	289,454	5.1	7.8	41.7	54.6	---	---
1977	285,360	5.2	8.0	43.3	56.5	3.6%	60.1%
1978	283,841	5.5	8.4	41.4	55.3	3.4	58.7
1979	278,548	5.8	8.7	42.1	56.6	3.4	60.0
1980	270,971	6.0	9.0	43.0	58.0	3.5	61.5

Colleges, only 10 percent in the University, and about 16 percent in the State University.

The seven-year period ending in 1980 was thus one of increasing percentages of young people enrolling in California higher education, particularly in the University and the State University, at a time when the number of high school graduates was declining as a result of an earlier decline in the birth rate and an increase in the rate of dropouts from high school. There did not appear to be a significant shift in freshman enrollments from one segment to another, in spite of the steady increase in the rate of enrollment in the University and the State University.

Differences Among the Counties

Significant differences among the counties in their college-going rates have been found each year (see Appendix B for county rates for first-time freshmen age 19 and under). Large counties with college-going rates for all segments combined of at least 68 percent in 1980 were Contra Costa, Marin, Merced, Orange, San Francisco, San Joaquin, and Santa Barbara. At the other extreme, four counties with at least 800 high school graduates in 1980 had rates below 50 percent--El Dorado, Humboldt, Mendocino, and Stanislaus. Los Angeles--the county with nearly 30 percent of the State's high school graduates--had a rate of 63.7 percent in 1980, which was higher than the statewide rate.

Differences among the counties in their college-going rates may be attributed to several interrelated factors. Geography appears to be an important factor, for example, in terms of proximity of potential students to one or more campuses of the University or the State University which rank high in undergraduate student preferences. Several demographic factors also appear to be related to county differences in rates--for example, the median level of educational attainment of the adult population, the percentage of households with family incomes below the poverty level, and the ethnic distribution of the county population.

Differences Between the Sexes

College-going rates for men and women who are recent high school graduates are displayed in Table 2 for 1977 through 1980 for each public segment of California higher education. (See Appendix C for these rates by county for 1977 and 1980.) In 1979, the college-going rate for women was, for the first time, at least equal to that of men in each segment. In 1980, however, the rate for men was once again slightly higher than that found for women in both

the University and the Community Colleges, although the overall rate continued to be higher for women. Since there are more women than men among the 1980 high school graduates, there are more women than men among the first-time freshmen in each segment, in spite of the higher University and Community College rates for men. Two-thirds of the independent institutions which reported the geographic origins of their first-time freshmen did so by sex. In these institutions, 47 percent of the freshmen were male and 53 percent female.

County college-going rates for men and women do not always reflect statewide patterns. In five of the eight counties in which a University campus is located--Orange, San Diego, Riverside, Santa Cruz, and Yolo--the University-going rate is higher for women than for men. A difference in University rates in favor of women may also be observed for several counties in which State University campuses are located, notably Fresno, San Francisco, Humboldt, and San Luis Obispo. In the case of the State University, the rate obtained for women is considerably higher than that for men in nearly all counties and statewide, the most notable exceptions being Santa Barbara, with a high Community College-going rate for women; Monterey, also with a high Community College rate; Solano; and Santa Cruz. County rates for the combined public segments also

TABLE 2

PERCENTAGES OF MEN AND WOMEN ENROLLED AS FIRST-TIME FRESHMEN IN EACH PUBLIC SEGMENT OF CALIFORNIA HIGHER EDUCATION (1977-1980)

Segment	Sex	Year 1977	1978	1979	1980
University of California	Male	5.4%	5.7%	5.8%	6.0%
	Female	5.0	5.4	5.8	5.9
California State University	Male	7.6	7.7	7.8	8.7
	Female	8.4	9.0	9.5	10.0
California Community Colleges	Male	43.2	41.1	41.1	43.1
	Female	43.4	41.6	43.1	42.9
Total	Male	56.2	54.5	54.7	57.8
	Female	56.8	56.0	58.4	58.8

show some sex differences which are significantly larger than the statewide difference of 1.0 percent (57.8 percent for men, 58.8 percent for women). Examples among the more populous counties are Riverside, San Mateo, Sacramento, Fresno, Sonoma, and Marin, for which the difference between men and women in the total college-going rate was at least 3.5 percent, with the rate for women higher than that found for men in each case.

Differences Among Ethnic Groups

A statewide summary of the ethnic distribution by sex of 1979 graduates of public California high schools and Fall 1980 first-time freshmen in the three segments of public higher education appears in Table 3. (See Appendix D for distributions by county.) Graphic representations of the data are displayed in Figures 1 and 2.

Methodology: The percentages in Table 3, Appendix D, and Figures 1 and 2 are not college-going rates and cannot be compared with percentages in previous tables. College-going rates were computed by dividing the numbers of first-time freshmen by the total number of high school graduates in the same year. This computation could not be performed for the various ethnic groups for two reasons. First, ethnic information is not available for June 1980 high school graduates, and use of 1979 data as the divisor to obtain rates would be inappropriate because of the decline in numbers of graduates between 1979 and 1980. Second, significant gaps exist in the ethnic data, most notably for certain State University campuses and for graduates of private high schools. Therefore, information about ethnicity in relation to college-going behavior is presented as a percentage of high school graduates and first-time freshmen in each public segment of higher education who were reported to be American Indian, Asian, Filipino, Black, Hispanic, or White. Students with unknown ethnicity were excluded from the computations.

Caution should be exercised in interpreting findings for the State University since no information was available for 26 percent of the first-time freshmen in Fall 1980. Counties with the lowest level of reporting of ethnic data are San Francisco (14 percent), San Mateo (45 percent), and Sacramento (53 percent). Comparisons with previous years must be made with caution because of the unreliability of the ethnic data for such purposes.

Statewide Findings: Blacks and Hispanics were less well represented among the first-time freshmen in the public segments in Fall 1980 than in the high school graduating class in 1979. This finding applies to both men and women, although there are sex differences among ethnic groups in terms of enrollment. Most notable are the higher percentage of Asian men than women and the lower percentage

TABLE 3

ETHNIC DISTRIBUTIONS OF 1979 GRADUATES OF PUBLIC CALIFORNIA HIGH SCHOOLS AND FALL 1980 FIRST-TIME FRESHMEN IN THE UNIVERSITY OF CALIFORNIA, THE CALIFORNIA STATE UNIVERSITY, AND THE CALIFORNIA COMMUNITY COLLEGES, BY SEX

Ethnic Group*	Sex	Segment: High School	University of California	California State University	California Community Colleges	Total: UC, CSU, and CCC
American Indian	M	0.7%	0.4%	1.2%	1.8%	1.5%
	F	0.7	0.4	1.1	1.6	1.4
	T	0.7	0.4	1.1	1.7	1.5
Asian	M	4.7	15.0	8.2	4.6	6.2
	F	4.5	13.5	7.3	3.7	5.3
	T	4.6	14.2	7.7	4.1	5.7
Filipino	M	0.9	2.6	2.0	1.4	1.7
	F	1.0	2.5	1.8	1.4	1.6
	T	0.9	2.6	1.9	1.4	1.6
Black	M	9.0	3.1	6.7	9.0	8.0
	F	9.5	5.0	9.1	9.5	8.9
	T	9.3	4.1	8.0	9.2	8.5
Hispanic	M	15.0	6.8	11.8	14.4	13.2
	F	15.0	6.0	11.2	14.3	13.0
	T	15.0	6.4	11.5	14.4	13.1
White	M	69.7	72.1	70.1	68.8	69.4
	F	69.3	72.6	69.5	69.5	69.8
	T	69.5	72.3	69.8	69.2	69.6
Ethnic Data Missing	M	2.6	3.2	26.0	5.2	8.8
	F	2.4	3.3	26.0	5.7	8.9
	T	2.5	3.2	26.0	5.9	8.9

*The sum of the percentages in each column, exclusive of "Ethnic Data Missing," is 100. Thus, the first entry at the top of the table means that American Indian males comprised 0.7 percent of the male high school graduates in 1979. Similarly, the last entry at the bottom of the table means that whites comprised 69.6 percent of the combined group of first-time freshmen in the three public segments of higher education in Fall 1980.

FIGURE 1

ETHNIC DISTRIBUTION OF HIGH SCHOOL GRADUATES AND
FIRST-TIME FRESHMEN IN ALL PUBLIC SEGMENTS COMBINED

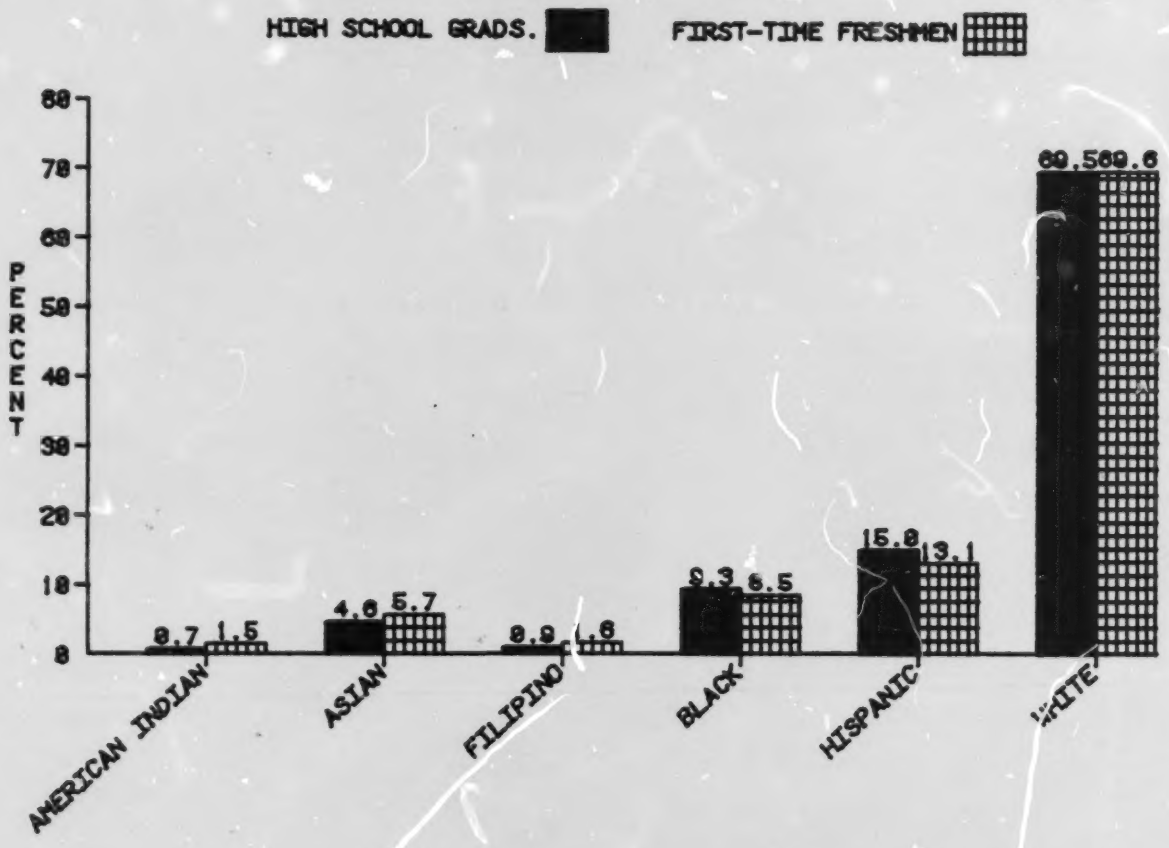

FIGURE 2

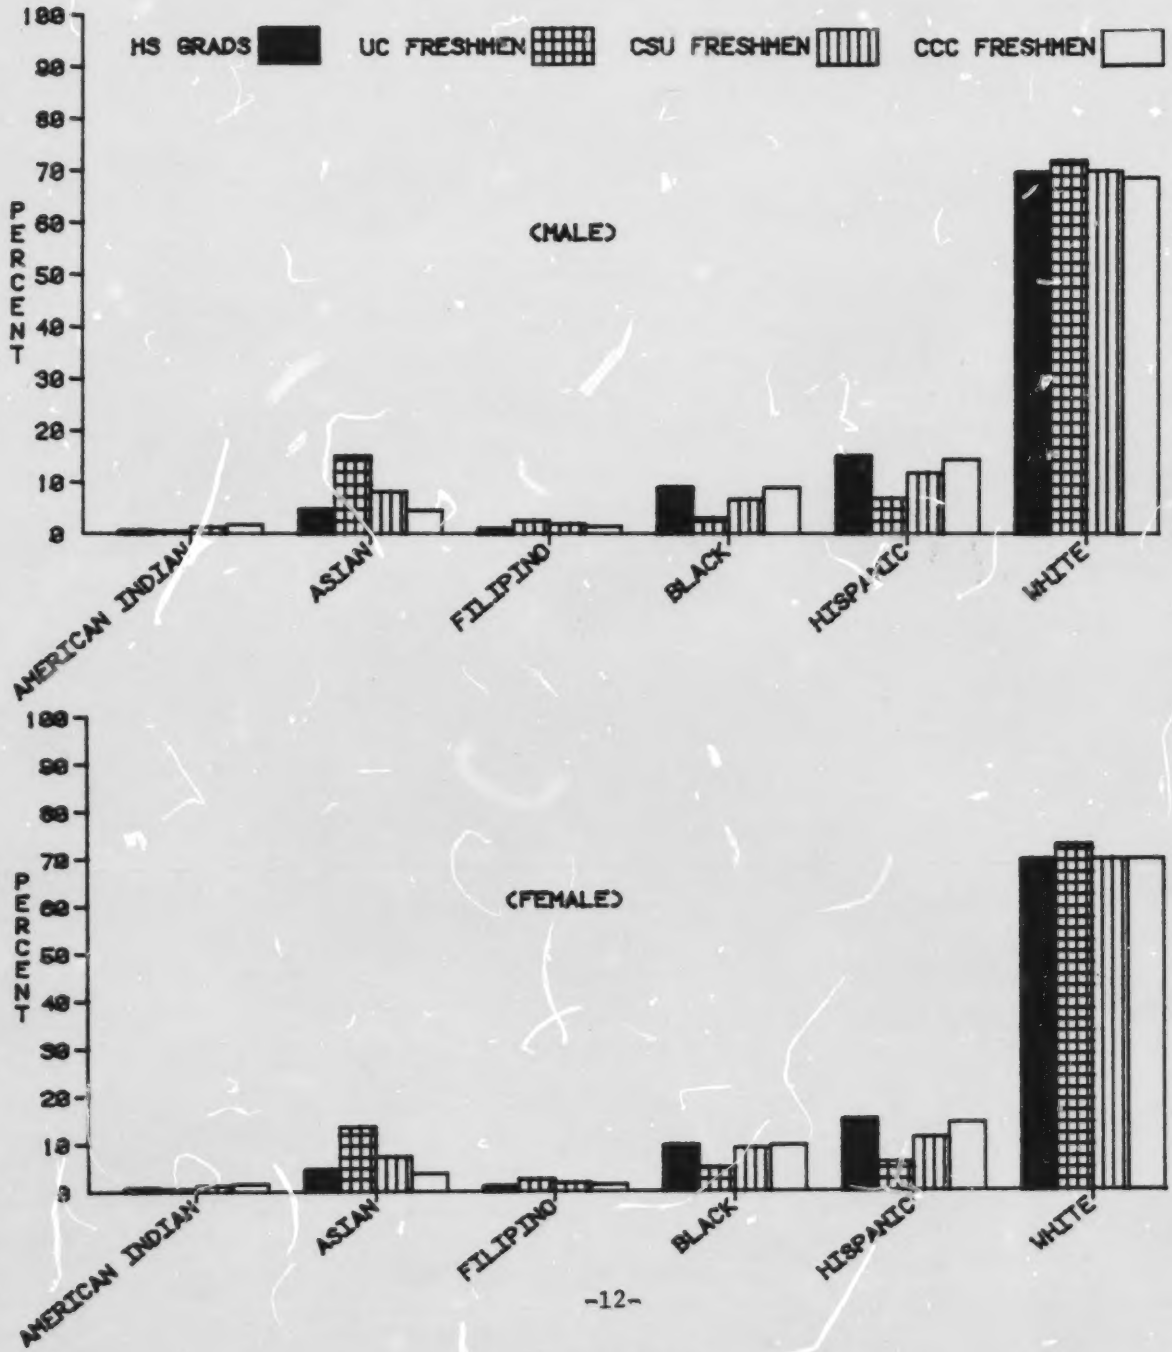
ETHNICITY OF HIGH SCHOOL GRADUATES
AND UNIVERSITY OF CALIFORNIA, CALIFORNIA STATE UNIVERSITY,
AND CALIFORNIA COMMUNITY COLLEGES FRESHMEN
BY SEX



of Black men than women among first-time freshmen. Although comparisons with 1979 are made cautiously, it appears that the representation of Blacks among first-time freshmen declined from 1979 to 1980, while the representation of Asians, Hispanics, and Filipinos increased slightly. These same directions of change were found for both men and women, and the size of the increase or decrease was similar when data for the three segments were combined.

Differences Among the Segments in Minority Enrollments: Differences among the segments in the ethnic composition of their first-time freshmen are significant. The most striking entry in Table 3 is for Asians as a percentage of the first-time freshmen in the University, in that it is more than three times as large as the percentage of Asians in the 1979 high school graduating class and significantly larger than the percentages enrolled as freshmen in the State University and the Community Colleges in Fall 1980. However, since the State University and the Community Colleges enroll significantly larger numbers of first-time freshmen than the University, the actual number of Asians enrolled in Community Colleges is much larger than in the University and the numbers in the State University only a few hundred less.*

The Community Colleges enrolled the largest percentages of American Indians, Blacks, and Hispanics as freshmen in 1980, compared with the other segments. The percentages of Blacks decreased between 1979 and 1980 in all three segments and among both men and women. The percentages for Hispanics, on the other hand, increased for both sexes in the State University and the Community Colleges but not in the University of California. The percentages of American Indians are small for all segments and did not appear to change much between 1979 and 1980. The percentages of Filipinos are also small in all segments but are larger than the percentage in the high school graduating class and appear to be increasing, at least at the University.

Sex differences in enrollment at the freshman level may be observed for the various ethnic groups. Among the Asians and Hispanics, the percentage representation of men is higher than that of women in each segment. Entries for Blacks in Table 3, on the other hand, show a higher percentage representation of women than men in each segment, but most of all in the University and the State University.

*If ethnic data for San Francisco State University were complete, the percentage of Asians in the State University segment might be considerably larger because of the high incidence of Asians in the San Francisco area.

County Differences in Minority Enrollments: Differences among the counties in the ethnic distribution of the 1979 high school graduates are fairly well correlated with differences in the percentages of the various ethnic groups enrolled as freshmen in public higher education in Fall 1980. Proximity to a University or State University campus appears to have a positive effect on the enrollment of Blacks and Hispanics in a four-year institution, while the absence of such proximity tends to increase enrollments in nearby Community Colleges. There are exceptions to this generalization, however--Ventura and Solano counties with no four-year public institution within their boundaries and rather atypical ethnic distributions of first-time freshmen at the University and the State University. Fresno, Tulare, and Kern counties--all with large percentages of Hispanics among their high school graduates--have relatively high percentages of Hispanics in the ethnic distributions of freshmen at the University and the State University, compared with statewide distributions of freshmen for these segments. The impact of outreach programs on increasing the percentages of Blacks and Hispanics in the ethnic distributions of first-time freshmen cannot be estimated at this time because of the unreliability of some of the data which would be used in making comparisons from year to year.

COMMUNITY COLLEGE TRANSFER STUDENTS

Methodology

Numbers of Community College students who transferred to the University and the State University between 1965 and 1980 are shown in Table 4 and Figure 3. These numbers cannot be expressed as rates of transfer since no information is available about the numbers of Community College students who were eligible for and interested in transferring. Rates based on gross enrollments would be relatively meaningless because of changes which have taken place over time in Community College student characteristics.

Students who are not eligible for freshman admission to the State University on the basis of their high school record can become eligible for admission as transfer students by earning a minimum of 56 semester units of transfer credit with a grade-point average of at least C (2.0). University transfer requirements for students who are not eligible for freshman admission are somewhat higher than those of the State University in terms of grade-point average (2.4) and the need to make up subject deficiencies incurred in high school. The University transfer group contains a significant percentage of students who were ineligible for the University on the basis of their high school records. No such information is available for the State University transfer group.

Trends in Transfer

The decline in the number of Community College students transferring to the University which began after the peak year of 1973 continued in Fall 1980. The number of transfers in 1973 was 8,193; in 1980, 5,356--a decline of 35 percent. The percentage decline between 1979 and 1980 was less than between 1978 and 1979, due in large part to a large increase in transfers to the University of California, Santa Cruz. However, the number of transfers declined significantly at the Los Angeles, Santa Barbara, San Diego, and Berkeley campuses of the University, and no significant changes occurred at the three other campuses enrolling undergraduates.

In the case of the State University, the decline from the peak year of 1975 was stemmed in Fall 1980, with an increase of 44 transfer students over Fall 1979. However, there had been a decrease of more than 5,000 students, or 14 percent, between fall terms 1975 and 1979, and the decrease in University transfers in Fall 1980 was significantly larger than the State University increase. Full-year transfer statistics for the State University show an increase of nearly 500 students in Spring 1981 over 1980, but a decrease of 177

TABLE 4

NUMBERS OF COMMUNITY COLLEGE STUDENTS WHO TRANSFERRED TO THE UNIVERSITY OF CALIFORNIA AND THE CALIFORNIA STATE UNIVERSITY TOGETHER WITH NUMBERS OF FIRST-TIME FRESHMEN FROM CALIFORNIA HIGH SCHOOLS (1965-1980)

	Community College Transfer Students			First-Time Freshmen

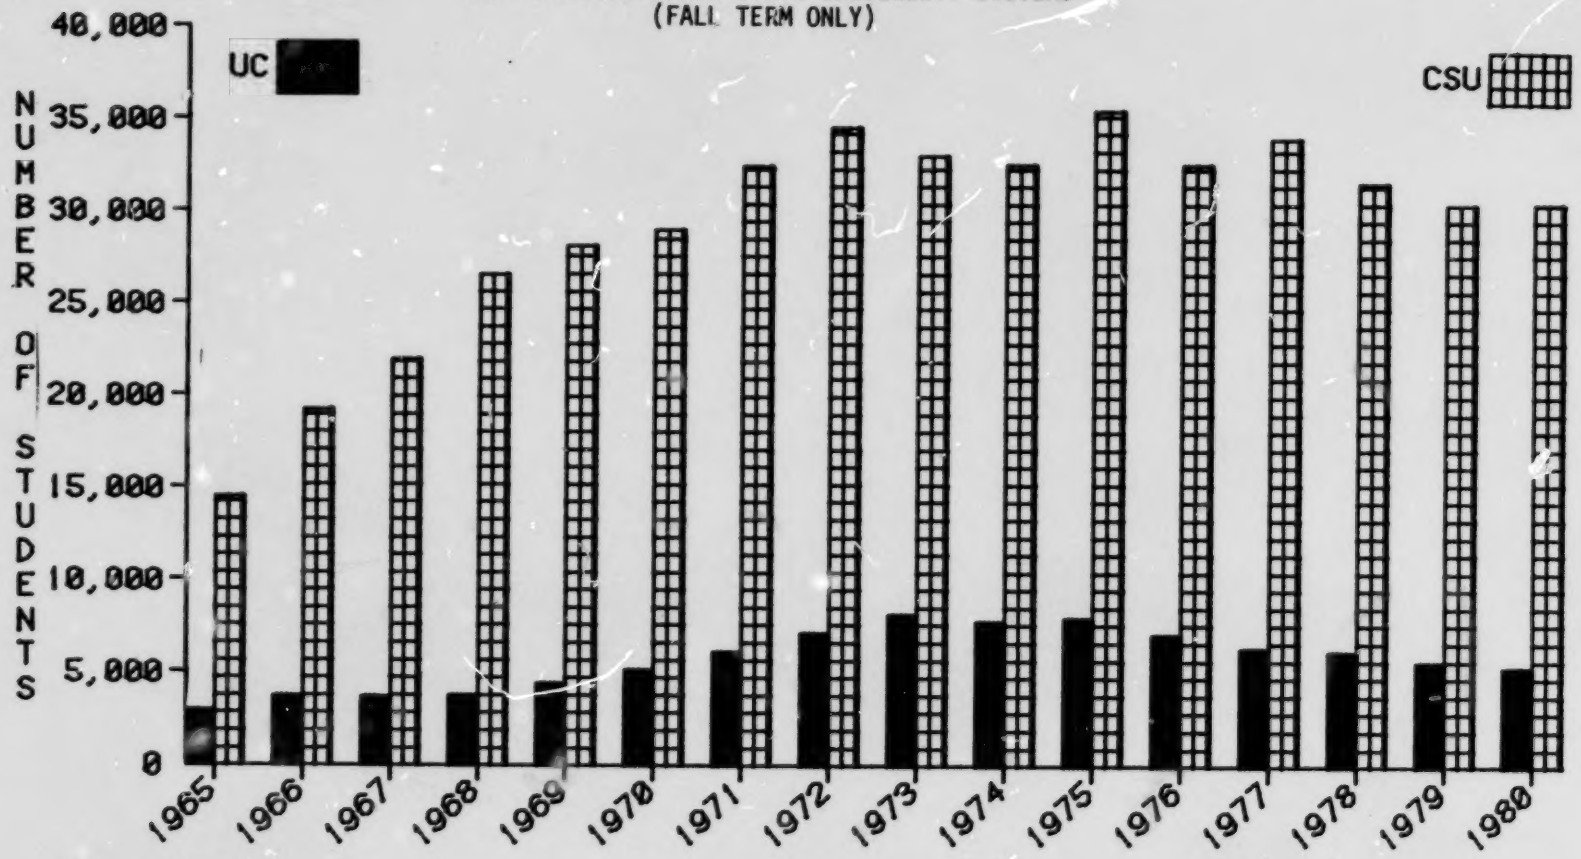
*Fall statistics represent about 90% of first-time freshmen who enter during the full year.

FIGURE 3

NUMBER OF STUDENTS WHO TRANSFERRED FROM COMMUNITY COLLEGES INTO THE UNIVERSITY OF CALIFORNIA AND THE CALIFORNIA STATE UNIVERSITY SYSTEMS
(FALL TERM ONLY)



transfers from one winter term to the next, when comparatively few students transfer. Thus the number of full-year transfers increased by 323 between 1979-80 and 1980-81, with decreases in the summer and winter terms and increases in fall and spring. Data are not yet available for Fall 1981 transfers to either segment.

The number of State University campuses which experienced increases in Community College transfer students between Fall 1979 and 1980 was about equal to the number with decreases, with two campuses showing virtually no change. San Jose State University had a decrease of 141 transfer students (5.5 percent), while San Bernardino, with the third smallest number of transfers, had an increase of almost 20 percent (97 students). Other campuses with increases of at least 5 percent were Stanislaus and California State Polytechnic at Pomona, while Bakersfield, Humboldt, Sonoma, and California State Polytechnic at San Luis Obispo each experienced a decrease of at least 5 percent between Fall 1979 and 1980. Thus there does not appear to be any clear pattern of change at the campus level, although the statewide decline in Community College transfers may have ended in 1980-81.

Information provided by the independent California Colleges and Universities shows that they are enrolling a significant number of transfer students from Community Colleges. More than 3,700 were reported to have transferred in the Fall 1980 term to 33 independent institutions in California, which is considerably more than the estimate of 2,000 made for Fall 1979. The most significant flow was the 1,770 students who transferred to the University of Southern California from 85 California Community Colleges. This number was almost two-thirds larger than that transferring to the Los Angeles or the Berkeley campus of the University of California in that term. Other independent institutions reporting at least 100 Community College transfer students were the California College of Arts and Crafts, Golden Gate University, Loyola Marymount University, University of the Pacific, University of San Diego, and the University of Santa Clara, with a total of nearly 1,000 transfers. Based on incomplete reporting, the number of male transfers appears to be only slightly larger than the number of females.

The relationship between numbers of first-time freshmen and transfer students enrolled in the University and the State University has changed over time, as seen in Table 4. The segments have differed for as long as data have been available, with the University's new freshmen always exceeding the number of Community College transfers enrolled, and the State University's transfer group significantly larger than its first-time freshmen. In 1979, the University enrolled 2.9 first-time freshmen for each Community College transfer student, compared with 1.2 transfer students for each first-time freshman in the State University. If full-year data are used for the State University, the ratio increases to 1.7 transfer student for each first-time freshman. In both segments, the proportion of transfer students relative to first-time freshmen has declined

since 1973 as the size of the freshman class has increased. It appears that the number of first-time freshmen age 19 and under declined in Fall 1980 in both segments, but the ratio of first-time freshmen to transfers remained relatively stable.

Differences Among Community Colleges

Of the 70 Community College districts, 42 had fewer than 50 students transfer to the University in Fall 1980--three more than in 1979. (See Appendix E for statistics for each Community College district.) Some districts with very large enrollments had few University transfers in 1980, for example, San Jose with an enrollment in credit courses of 21,170 and 27 transfers to the University; State Center (Fresno), an enrollment of 17,760 and 42 transfers; and San Mateo, an enrollment of 33,673 on its three campuses and 191 transfers. Nine Community College districts produced 44 percent of the transfer students to the University in 1980. While most districts have had a decline in the number of University transfers during the past four years, Saddleback (with an enrollment for credit of more than 25,000 students) had an increase from 72 to 129 between 1979 and 1980, and Cabrillo increased from 118 to 164, at least in part as a result of the recruitment program of the University of California, Santa Cruz.

Although the number of transfers to the State University had been declining until 1980-81, only four districts, each with an enrollment of fewer than 2,000 students, had fewer than 50 transfers to the State University in Fall 1980. On the other hand, 22 of the 70 districts had more than 500 students transfer to the State University in Fall 1980, including three districts which had more than 1,000 each. Three districts--Los Angeles, Los Rios, and North Orange--had a combined total for State University transfers which was larger than the total number of University transfers from all Community College districts (6,273 from the three districts to the State University, compared to 5,356 to the University from all 70 districts). Community College students tend to transfer to the State University campus which is closest to the institution they had been attending for their lower division program, with the exception of the State Polytechnic Universities in Pomona and San Luis Obispo, which draw smaller percentages from nearby Community Colleges. For example, 85 percent of the State University transfers from the State Center District enroll at California State University, Fresno; 84 percent from the San Diego Community Colleges at San Diego State University; and 80 percent from Butte College at California State University, Chico.

More than one-fourth of the districts experienced an increase or decrease of at least 10 percent in the number of State University transfer students between Fall 1979 and 1980. However, no patterns of change between these two years are discernible. Over the four-year period from 1977 to 1980, State University transfers steadily

decreased from 13 districts and steadily increased in only one district--a district with comparatively few transfers to the State University. Districts with the largest percentage decreases were Rio Hondo with a 34 percent decline, Peralta with 28 percent, Rancho Santiago with 23 percent, Citrus with 21 percent, and Long Beach and Santa Monica, with 20 percent each. Thus the small statewide increase between Fall 1979 and 1980 appears to have been a result of random fluctuations in districts with small numbers of transfer students.

Differences Between Men and Women

Men comprise 52 percent of the Community College transfers at the University and women 48 percent. When ethnic distributions are compared, the percentages for Asians and Hispanic men are higher than the University-wide percentage for men, while the percentages for Black and Filipino women are higher than the University-wide figure for women and, in fact, higher than those found for men (52 and 58 percent for Black and Filipino women transfers, respectively, compared with a University-wide percentage of 48).

For the State University, the transfer group comprises 51 percent women and 49 percent men, when the predominantly male non-resident aliens are excluded from the computation. Ethnic differences in the sex distributions of transfer students are similar to those found for the University, with the percentages for Asian and Hispanic female transfers lower than the University-wide figure--in fact, less than 50 percent--while the percentage for Black female transfers is significantly higher than the University-wide percentage--58 and 51 percent, respectively.

Differences Among Ethnic Groups

The ethnic distributions of Fall 1980 Community College transfer students to the University and State University are displayed in Table 5, together with the distribution for first-time Community College freshmen that fall. Distributions for each Community College are displayed in Appendix F. Differences between the distributions for 1979 and 1980 are not large. The percentages of Asian and Black transfer students in the University distributions increased by 0.8 and 0.4, respectively, while the percentage of whites decreased by 1.4, to 77.1. White transfer students increased in the State University from 73.5 to 75.1 percent of the distribution. Decreases occurred among Asians (-0.5), Filipinos (-0.6), and Blacks (-0.7), but the percentages for Hispanics increased 0.3.

The high percentage of transfer students to the State University whose ethnicity is unknown limits the reliability of these findings and any comparisons based on them. Still there appears to be

little doubt that the percentages of Black and Hispanic transfer students to the State University are larger than those found for the University, while the reverse is true for Asians. Segmental differences involving these ethnic groups may be increasing for Asians and Hispanics but decreasing for Blacks, at least between 1979 and 1980.

Gross comparisons may be made between the ethnic distribution of first-time freshmen age 19 and under in the Community Colleges in Fall 1980 and those of transfer students. About 30 percent of the first-time Community College freshmen were reported to be in one of the ethnic minority groups in Fall 1980, compared with 22.9 percent of the transfer students to the University and 24.9 percent of the transfers to the State University. The percentages of Asians in the distributions of transfer students are significantly larger than that found for first-time freshmen, while the percentages of transfers who are Black or Hispanic are lower than those found for the Community College freshmen.

Sex differences in the ethnic distributions of transfer students were similar to those found for first-time freshmen in the University and the State University. The percentages of Asian and Hispanic men were higher than those obtained for women, while the percentages of Black women were higher than those found for men in 1980.

TABLE 5

ETHNIC DISTRIBUTIONS OF COMMUNITY COLLEGE TRANSFER STUDENTS TO THE UNIVERSITY AND THE STATE UNIVERSITY, COMPARED WITH THAT OF FIRST-TIME FRESHMEN IN COMMUNITY COLLEGES (FALL 1980)

	Type of Students*		
Ethnic Group	First-Time Freshmen	Transfer to the University	Transfer to the State University
American Indian	1.7%	1.1%	1.5%
Asian	4.1	9.6	6.1
Filipino	1.4	1.1	1.2
Black	9.2	3.7	6.1
Hispanic	14.4	7.4	10.0
White	69.2	77.1	75.1
Unknown	5.9	10.0	37.2

*Columns add to 100 percent, exclusive of the "unknown."

APPENDIX A

CALIFORNIA COLLEGES AND UNIVERSITIES BY COUNTY

Explanatory Notes

1. A California county map showing the number of institutions in each county precedes the list of counties.

2. The independent institutions listed are all general-purpose colleges and universities which admit first-time freshmen and are accredited by the Western Association of Schools and Colleges.

APPENDIX B

PERCENTAGES OF RECENT HIGH SCHOOL GRADUATES
ENROLLING IN EACH SEGMENT OF CALIFORNIA
HIGHER EDUCATION, BY COUNTY AND YEAR (1974, 1976,1978-1980)

Explanatory Notes

1. The percentages are estimates of the college-going rates for recent high school graduates in each of the four segments of California higher education. The percentages were obtained by dividing the numbers of students who were 19 years of age or under when they enrolled as first-time freshmen by the numbers of high school graduates in June of the same year. Both part- and full-time students were included in the computation of the participation rates.

2. Numbers of high school graduates were obtained from annual reports prepared by the State Department of Education for both public and private high schools.

3. Student data tapes submitted to the Commission annually by The University of California, The California State University, and the California Community Colleges were the major source of information about the high schools last attended by first-time freshmen.

   Community College-going rates are judged to be less reliable than those of the University and State University for several reasons, including a high percentage of "unknowns" for several districts. In addition, the rates are confounded by uncertainty about the inclusion of high school dropouts or students who have not yet graduated from high school, or both, all of whom are eligible to enroll in a Community College under certain conditions. Rates which appeared to be highly questionable have been omitted, with the prior year's rate shown instead in parenthesis.

   For the first time in 1979, first-time freshmen with "unknown" high school codes were found for the University and the State University. They constitute 5 percent of the University and 6 percent of the State University freshmen in the analysis, or less than 1 percent of the high school graduates. However, the "unknowns" should not be added to the statewide rates for the University and the State University since they may not be graduates of California high schools.

4. Data for independent colleges and universities were obtained by means of a special request for assistance made by the Association of Independent California Colleges and Universities. Nearly 70 percent of the institutions responded with information about the origins of their first-time freshmen.

   Information about the college-going rates in the independent institutions is not wholly comparable to that obtained for the public segments since some institutions could provide only zip codes for their students' home addresses rather than State codes for the high schools from which their students graduated. Furthermore, it was not feasible for a few institutions to limit the first-time freshman group studied to those 19 years and under at entrance. Information for Fall 1979 was used for one institution which was unable to provide data for 1980.

   The following institutions responded with information about the county of origin of their first-time freshmen:

   California Baptist College
   California College of Arts and Crafts
   California Institute of Technology
   California Lutheran College
   Center for Early Education
   Claremont McKenna College
   Cogswell College
   College of Notre Dame
   Dominican College of San Rafael
   Fresno Pacific College
   Golden Gate University
   Harvey Mudd College
   Holy Names College
   Humphreys College
   Los Angeles Baptist College
   Loyola-Marymount University
   Marymount Palos Verdes College
   Menlo College
   Mount St. Marys College
   Northrop University
   Occidental College
   Pacific Union College
   Pepperdine University
   Pitzer College
   Point Loma College
   Pomona College
   Saint Mary's College of California
   San Francisco Art Institute
   Scripps College
   Simpson College
   Stanford University
   United States International University
   University of La Verne
   University of the Pacific
   University of Redlands
   University of San Diego
   University of San Francisco
   University of Santa Clara
   University of Southern California
   Westmont College
   Whittier College
   Woodbury University

5. Information is arranged so that counties with the largest numbers of high school graduates generally appear first. No percentages are shown for the seven counties with the smallest numbers of high school graduates--Colusa, Trinity, Modoc, Mariposa, Mono, Sierra, and Alpine--since such percentages are unreliable.

APPENDIX B

PERCENTAGES OF RECENT HIGH SCHOOL GRADUATES ENROLLING IN EACH SEGMENT OF CALIFORNIA HIGHER EDUCATION BY COUNTY AND YEAR (1974, 1976, 1978-1980)*

			Percentage Enrolling as Freshmen					
County	Year	Number H.S. Grads.	UC	CSU	CCC	Ind.	Total Public	Grand Total
Los Angeles	1974	90,817	5.7%	8.6%	38.5%	--	52.8%	--

*Percents were not calculated for Colusa, Trinity, Modoc, Mariposa, Mono, Sierra, and Alpine Counties because of the small numbers of high school graduates. However, data for these counties are included in the "Total" figures.

APPENDIX C

PERCENTAGES OF MEN AND WOMEN ENROLLED AS FIRST-TIME FRESHMEN IN EACH OF THE PUBLIC SEGMENTS OF CALIFORNIA HIGHER EDUCATION, BY COUNTY AND YEAR (1977 AND 1980)

Explanatory Note

Percentages were obtained for men and women separately beginning in Fall 1977, using data described in Appendix B. Since information about the proportions of male and female graduates from private high schools was incomplete, it was necessary to make estimates for some counties.

APPENDIX C

PERCENTAGES OF MEN AND WOMEN ENROLLED AS FIRST-TIME FRESHMEN IN EACH OF THE PUBLIC SEGMENTS OF CALIFORNIA HIGHER EDUCATION, BY COUNTY AND YEAR (1977 AND 1980)

Percentage Enrolled As First-Time Freshmen

		University of California		California State University		California Community Colleges		Total	
County	Sex	1977	1980	1977	1980	1977	1980	1977	1980
Los Angeles	Male	6.1%	6.7%	9.6%	9.8%	40.9%	41.9%	56.6%	58.5%

APPENDIX D

ETHNIC DISTRIBUTION OF 1979 GRADUATES OF PUBLIC CALIFORNIA HIGH SCHOOLS, AND 1980 FIRST-TIME FRESHMEN AT THE UNIVERSITY OF CALIFORNIA, THE CALIFORNIA STATE UNIVERSITY, AND THE CALIFORNIA COMMUNITY COLLEGES, BY COUNTY AND SEX

Explanatory Notes

1. Rows of percentages in Appendix D add to 100 by excluding the column of "Ethnic Data Missing." However, the numbers in the column to the left of the percentages include students whose ethnicity was not reported. The ethnic distribution of high school graduates in the various counties may be compared with that of students from those counties who enrolled in each segment as first-time freshmen.

2. Ethnic data for public high school graduates in 1979 were obtained from a special report prepared by the State Department of Education. Ethnic data were not available for graduates in 1980. Therefore, caution needs to be exercised in comparing the ethnic distributions of 1979 high school graduates and 1980 college and university freshmen.

   Furthermore, ethnic data were unavailable for some or all graduates of 19 high school districts, or for about 2.5 percent of all high school graduates in 1979. Santa Barbara and Santa Cruz Counties reported data for fewer than 20 percent of their graduates. Dashes (--) in the "Ethnic Data Missing" column indicate that the ethnicity of all 1979 graduates appears to have been accounted for.

3. Ethnic data for first-time freshmen age 19 and under in each of the three public segments were obtained from student data tapes submitted to the Commission by the segments. In counties where fewer than 50 high school graduates enrolled in the University or the State University, data have been combined for the two sexes or segments, or both. When the total number was less than 50, dashes (--) have been entered for the ethnic minority groups in place of percentages, but with a percentage entered for the majority "white" groups.

4. Attention is called to the high percentage of "Ethnic Data Missing" for State University students in many counties, particularly Sacramento, San Mateo, San Francisco, Contra Costa, Marin, Solano, Sonoma, and Santa Clara.

APPENDIX E

FLOW OF TRANSFER STUDENTS FROM THE CALIFORNIA COMMUNITY COLLEGES TO THE UNIVERSITY OF CALIFORNIA AND THE CALIFORNIA STATE UNIVERSITY (FALL 1977 - FALL 1980)

Explanatory Notes

1. Fall 1977 and 1978 data for the California Community Colleges were obtained from enrollment reports submitted annually to the Department of Finance by the Chancellor's Office.

2. Fall 1977 and 1978 data for The University of California were obtained from enrollment reports submitted by the University to the California Department of Finance.

3. Fall 1977 and 1978 data for The California State University was obtained from Table 9, "Undergraduate Transfers from California Community Colleges," published in the State University's Statistical Report Number 8.

4. Data for Fall 1979 and 1980 were obtained from student data tapes submitted to the Commission by the University, the State University, and the Community Colleges.

APPENDIX E

FLOW OF TRANSFER STUDENTS FROM THE CALIFORNIA COMMUNITY COLLEGES TO THE UNIVERSITY OF CALIFORNIA AND THE CALIFORNIA STATE UNIVERSITY (FALL 1977 - FALL 1980)

Community College District	Year	Total Enrollment for Credit	Number of Transfers to UC	Number of Transfers to CSU	Nearest CSU Campus(es)	Percent at Nearest CSU Campus
Allan Hancock	1977	6,824	39	207	San Luis Obispo	33%
	1978	7,881	38	189		30
	1979	8,195	40	209		34
	1980	8,735	28	200		30

APPENDIX F

ETHNIC DISTRIBUTION OF COMMUNITY COLLEGE TRANSFER STUDENTS TO THE UNIVERSITY OF CALIFORNIA AND THE CALIFORNIA STATE UNIVERSITY (FALL 1980)

Explanatory Notes

1. Rows of percentages add to 100 by excluding the column, "Percent Unknown Ethnicity." The numbers in the column to the left of the percentages include transfer students whose ethnicity was unknown.

2. Data were obtained from student data tapes submitted to the Commission by the University and the State University.

3. When the ethnicity was known for fewer than 50 students in a particular row in the Appendix, dashes (--) have been entered for the ethnic minority groups and the percentage computed only for "white."

4. Community Colleges appear in alphabetical order.

APPENDIX F

ETHNIC DISTRIBUTION OF COMMUNITY COLLEGE TRANSFER STUDENTS TO THE UNIVERSITY OF CALIFORNIA AND THE CALIFORNIA STATE UNIVERSITY (FALL 1980)

(In Percents)

Community College	Transfer to	N	Ethnicity: American Indian	Asian	Filipino	Black	Hispanic	White	Percent Unknown Ethnicity

APPENDIX G

NUMBERS OF COMMUNITY COLLEGE STUDENTS WHO TRANSFERRED TO THE UNIVERSITY OF CALIFORNIA AND THE CALIFORNIA STATE UNIVERSITY, TOGETHER WITH NUMBERS OF FIRST-TIME FRESHMEN FROM CALIFORNIA HIGH SCHOOLS (1965-1980)

Explanatory Notes

1. Information about numbers of first-time freshmen and transfer students in the State University was obtained from the most recent issues of California State University and Colleges Statistical Abstract and Report 8 of the Statistical Report of the State University, "Origin of Fall Term Enrollments."

2. Similar information for University of California students through Fall 1973 was obtained from these same sources. Information for subsequent years was obtained from University internal reports and worksheets, except for 1977 and 1978 transfer student data which were obtained from reports submitted by the University to the California Department of Finance, and 1979 and 1980 data from the student data tape submitted to the Commission.

APPENDIX G

NUMBERS OF COMMUNITY COLLEGE STUDENTS WHO TRANSFERRED TO THE UNIVERSITY OF CALIFORNIA AND THE CALIFORNIA STATE UNIVERSITY TOGETHER WITH NUMBERS OF FIRST-TIME FRESHMEN FROM CALIFORNIA HIGH SCHOOLS (1965-1980)

	Community College Transfer Students			First-Time Freshmen	
	Fall Term		Full Year	Fall Term Only	
Year	UC	CSUC	CSUC	UC	CSUC*
1965	2,948	14,603	--	--	14,023
1966	3,761	19,295	--	12,341	15,574
1967	3,702	22,059	--	13,072	16,082
1968	3,785	26,596	--	11,665	18,844
1969	4,458	28,207	43,963	12,066	17,539
1970	5,166	29,059	49,245	13,233	18,984
1971	6,154	32,546	52,989	13,637	19,306
1972	7,165	34,619	53,820	14,358	22,094
1973	8,193	33,089	51,335	15,011	22,210
1974	7,813	32,646	51,144	14,915	22,886
1975	8,002	35,537	52,917	15,460	23,239
1976	7,123	32,653	51,230	14,935	23,498
1977	6,392	34,001	51,159	14,820	23,867
1978	6,193	31,609	47,430	15,850	24,668
1979	5,654	30,483	46,326	16,534	25,703
1980	5,356	30,527	46,649	16,340	25,470

*Fall statistics represent about 30% of first-time freshmen who enter during the full year.
